Thiruvananthapuram, Kerala, India | +91-8138055705 | nirmaltrejil@gmail.com | linkedin.com/in/nirmaltr | nirmaltr.vercel.app

PROFESSIONAL SUMMARY

Full Stack Software Engineer with 4+ years of experience designing, building, and scaling enterprise CRM and business applications for the automobile service industry. Proven track record architecting modular front-end and back-end systems using Angular, PHP (CodeIgniter 4), Node.js, and Java Spring Boot, backed by relational and NoSQL databases (MySQL, Oracle, MariaDB, MongoDB). Skilled in REST API design, real-time communication (Socket.IO, Firebase), cloud storage (AWS S3), and secure authentication (JWT, OAuth, RBAC). Adept at optimizing SQL performance, leading small engineering teams, and delivering production-grade features across the full software lifecycle in Agile environments.

CORE COMPETENCIES

Enterprise CRM Development • Full Stack Development • System Architecture & Design • REST API Design & Integration • Database Design & Query Optimization • Real-Time Application Development • Cloud Storage & Services (AWS) • Authentication & Access Control • Team Leadership & Code Review • Agile Development & Client Interaction • Production Support & Bug Resolution • Requirement Analysis

TECHNICAL SKILLS

Frontend: Angular, TypeScript, JavaScript, HTML5, CSS3, Tailwind CSS
Backend: PHP (CodeIgniter 4), Node.js, Java, Spring Boot, REST APIs
Databases: MySQL, Oracle, MariaDB, MongoDB, Schema Design, Query Optimization
Cloud & Services: AWS, Amazon S3, Firebase, Firebase Cloud Messaging (FCM)
Real-Time Systems: Socket.IO, WebSockets
Authentication & Security: JWT, OAuth, Role-Based Access Control (RBAC)
Tools & Platforms: Git, GitHub, VS Code, Postman, Swagger, Linux, PuTTY, MPDF

PROFESSIONAL EXPERIENCE

Software Engineer <i>LogicInFeel, Trivandrum, Kerala</i>	Feb 2023 – Present
- Architected and developed a full-scale Enterprise CRM platform for the automobile service industry, spanning customer management, lead management, appointment scheduling, workshop operations, job card management, vehicle inspection, service reminders, and quotation management modules. - Designed and implemented a Vehicle Inspection System using Java Spring Boot, including inspection workflows, secure shareable inspection links with time-bound token validation, and backend APIs for report generation. - Engineered core CRM modules end-to-end using Angular, PHP (CodeIgniter 4), Node.js, MySQL, and MongoDB, delivering customer recall management, lost customer tracking, dashboards, and analytics. - Integrated third-party services including WhatsApp for customer communication and Firebase Cloud Messaging (FCM) for real-time push notifications, and developed real-time CRM updates using Socket.IO. - Designed AWS S3-based file storage architecture and built PDF generation/reporting pipelines using MPDF for job cards, quotations, and inspection reports. - Designed and documented REST APIs using Postman and Swagger, and implemented JWT-based authentication with role-based access control (RBAC) across CRM modules. - Developed Java-based backend modules and cross-service integrations, extending the platform beyond its core PHP stack. - Collaborated directly with clients and stakeholders to analyze requirements, resolve production issues, and translate business needs into scalable technical solutions.	
Software Engineer <i>Bitbridge Technologies, Trivandrum, Kerala</i>	Jul 2022 – Feb 2023
- Developed authentication systems and reusable frontend modules for web applications. - Built responsive user interfaces and integrated REST APIs to connect frontend and backend services. - Collaborated closely with backend engineering teams to deliver features on schedule within an Agile workflow.	

KEY ACHIEVEMENTS

- Optimized slow-running SQL queries and database schemas across MySQL and MariaDB, improving response times and API performance for core CRM modules.
- Took end-to-end ownership of major CRM feature areas — from requirement analysis and architecture through deployment and production support.
- Delivered large-scale platform enhancements, including new modules (recall management, lost customer tracking, service reminders) that expanded CRM capability.
- Led and mentored a team of 2–4 developers, driving code quality and on-time delivery through structured code reviews.

PROJECTS

Enterprise CRM System — Automobile Service Industry

Tech Stack: Angular, PHP (CodeIgniter 4), Node.js, MySQL, MongoDB, Socket.IO, Firebase

- Primary product owned since joining LogicInfeel — a multi-module CRM used to run day-to-day operations for automobile service centers, from lead intake through job completion and customer follow-up.
- Focused on making customer-facing workflows (recall management, service reminders, lost customer tracking) reliable and fast, since these directly affect how service centers retain repeat customers.

Vehicle Inspection & Job Card Management System (Java Spring Boot)

Tech Stack: Java, Spring Boot, REST APIs, token-based authentication

- Built as a companion module to the CRM — lets inspectors generate a vehicle inspection report and share it externally (e.g., with a customer) via a link that expires after a set time, without exposing the rest of the CRM.
- The core engineering challenge was controlled, time-bound access: designing token validation so a shared link works exactly as long as intended and no longer.

EDUCATION

B.Tech in Computer Science and Engineering

APJ Abdul Kalam Technological University — 2021

CERTIFICATIONS

- Java Programming Masterclass — Udemy
- AWS Development Tools and Services — AWS
- Cybersecurity and IoT — Coursera
- Certified Secure Computer User — EC-Council
- Google Analytics for Beginners — Google
